MEMORANDUM FOR THE RECORD

SUBJECT: Lighting at Building A - 15

25X1A9a

1. Mr. [REDACTED] phoned today concerning the proposed lighting in the new Center. The electrician wants to suspend the aisle light switches on temporary "legs" in such a position that they will be on the ends of each stack row. Mr.

25X1A9a

[REDACTED] question was, should this be done throughout the storage area of the building, or was it possible that we wished to use the space for something other than steel shelving. I told him that it is planned to fill the storage area with steel shelving as is shown in his drawings.

25X1A9a

2. [REDACTED] also raised the question as to whether or not a switch was desired at the end of each stack row. He pointed out that there might be some significant economy in having one switch for three rows. I told him that one switch per row was desirable, but that I could see no objection to the alternative if any significant economy was involved.
